PERFORMANCE NUMBERS FOR CLASS F SHARES AS OF 03/31/2019:

ULTRA SHORT BOND FUND: 1 YEAR: 2.52%; SINCE INCEPTION (10/17/2016): 1.82%. EXPENSE RATIO: GROSS, 0.44%; NET, 0.37%
SHORT DURATION INCOME FUND: 1 YEAR: 3.80%; 3 YEARS: 2.91%; 5 YEARS: 2.28%; 10 YEARS: 4.26%; EXPENSE RATIO: 0.49%
FLOATING RATE FUND: 1 YEAR: 2.07%; 3 YEARS: 5.10%; 5 YEARS: 3.47%; 10 YEARS: 6.48%; EXPENSE RATIO: 0.69%

The performance quoted represents past performance, which is no indication of future results. Current performance may be higher or lower than the performance data quoted. The investment return and principal value of an investment in the Fund will fluctuate so that shares, on any given day or when redeemed, may be worth more or less than the original cost. You can obtain performance data current to the most recent month-end by calling Lord Abbett at 888-522-2388 or referring to lordabbett.com.

MAY HAVE GENERATED A SUPERIOR OUTCOME OVER TIME...

Hypothetical growth of \$1M (11/01/2016 - 03/31/2019)

Source: Morningstar. Illustration ran since first full month of Ultra Short Bond and reflects cumulative returns, with the reinvestment of dividends and income.

All fund data is based on class F shares. All data as of 05/31/2019 unless noted otherwise.

Class F shares are available only to eligible fee-based advisory programs and certain registered investment advisors. For additional information, see the Fund's current prospectus.

¹The Ultra Short Bond Fund's 7-day yield is shown without sales charges. The Fund's subsidized 7-day yield takes into account any fee waiver or expense limitation arrangements, if any. Without such fee waivers or expense limitation arrangements, the Fund's 7-day yield would have been lower. Information regarding any fee waivers or expense limitation arrangements applicable to the Fund is provided with the Fund's expense ratio information. The Fund's 7-day un-subsidized yield as of 05/31/2019 was 2.50%.

²30-day standardized yield is an estimate of a mutual fund's net investment income measured over a 30-day period. It is expressed as an annual percentage rate using a method of calculation adopted by the Securities and Exchange Commission (SEC). In absence of the fee waiver, 30-day standardized yield would have been lower. Yields for other share classes will vary. The 30-day unsubsidized yield for the Ultra Short Bond Fund as of 05/31/2019 was 2.45%.

³Hypothetical portfolio represents 1/3 of each fund. Returns shown are for illustrative purposes only.

Important Information

A Fund's 7-day yield is computed by averaging daily income dividends declared (net of expenses) in the Fund over the previous 7 days, and dividing that annualized rate by the Fund's NAV. This is a rolling calculation, updated daily.

Dividend yield is a financial ratio that shows how much a mutual fund pays out in dividends each year relative to its net asset value (NAV). Dividend yield is calculated by annualizing the last dividend and dividing it by a fund's NAV. A fund dividend yield (subsidized at NAV) takes into account any fee waiver or limitation arrangements, if any. Without such fee waivers or expense limitation arrangements, a fund dividend yield would have been lower.

Expense Ratio Details: The Ultra Short Bond net expense ratio takes into account contractual fee waivers/expense reimbursements that currently are scheduled to remain in place through 03/31/2020. For periods when fees and expenses were waived and/or reimbursed, the Fund benefited by not bearing such expenses. Without such fee waivers/reimbursements, performance would have been lower.

Average Effective Duration: The change in the value of a fixed income security that will result from a 1% change in interest rates, taking into account anticipated cash flow fluctuations from mortgage prepayments, puts, adjustable coupons, and potential call dates. Duration is expressed as a number of years, and generally, the larger a duration, the greater the interest-rate risk or reward for a portfolio's underlying bond prices. Where applicable, certain investments, such as common or preferred stock, convertible bonds and convertible preferred stock, ETFs, ADRs, and CPI swaps and related futures, are excluded from these calculations.

Barron's Information

*Among 57 qualifying fund families. Based on net total return of the one-year period ending 12/31/2018. Barron's Best Mutual Fund Families, March 11, 2019, Lord Abbett Funds ranked 21 out of 57, 3 out of 55, 3 out of 49 mutual fund families within the taxable bond category for the 1-, 5- and 10- year periods ending 12/31/2018, respectively. Barron's Best Mutual Fund Families, February 8, 2014, #3 in the Taxable Bond Category among 64 fund families. Based on the net total return of the one-year period ending 12/31/2013. Barron's Best Mutual Fund Families, February 11, 2013, #2 in the Taxable Bond Category among 62 fund families. Based on the net total return of the one-year period ending 12/31/2012. Barron's Best Mutual Fund Families, February 6, 2012, #4 in the Taxable Bond Category among 58 fund families. Based on the net total return of the one-year period ending 12/31/2011.

Barron's, "Best Fund Families of 2018," March 11, 2019. Barron's rankings are based on asset-weighted returns in five categories — US equity funds; world equity funds; mixed equity funds; taxable bond funds; and tax-exempt funds. To be included for Lipper/Barron's Fund Survey, each fund in the survey must have had at least three funds in Lipper's general equity category, one world equity category, one mixed-asset, two taxable-bond funds and one national tax-exempt bond fund. Rankings also take into account an individual fund's performance within its Lipper peer universe. Each fund's return was measured against those of all funds in its Lipper category, resulting in a percentile ranking which was then weighted by asset size, relative to the fund family's other assets in its general classification. Lipper calculated each fund's net total return for the year ended December 31, 2018, minus the effects of 12b-1 fees and sales charges. Barron's Fund Family Rankings are awarded annually.

The **Bloomberg Barclays U.S. Aggregate Bond Index** represents securities that are SEC-registered, taxable, and dollar-denominated. The index covers the U.S. investment-grade fixed-rate bond market, with index components for government and corporate securities, mortgage pass-through securities, and asset-backed securities. Total return comprises price appreciation/depreciation and income as a percentage of the original investment.

Indexes are unmanaged, do not reflect the deduction of fees or expenses, and are not available for direct investment.

A Note about Risk

The Short Duration Income Fund is subject to the general risks associated with investing in debt securities, including market, credit, liquidity, and interest rate risk. The value of an investment will change as interest rates fluctuate and in response to market movements. When interest rates fall, the prices of debt securities tend to rise, and when interest rates rise, the prices of debt securities are likely to decline. Debt securities are subject to credit risk, which is the risk that the issuer will fail to make timely payments of interest and principal to the Fund. The Fund may invest in high yield, lower-rated debt securities, sometimes called junk bonds and may involve greater risks than higher rated debt securities. These securities carry increased risks of price volatility, illiquidity, and the possibility of default in the timely payment of interest and principal. The Fund may invest in foreign or emerging market securities, which may be adversely affected by economic, political, or regulatory factors and subject to currency volatility and greater liquidity risk. The Fund may invest in derivatives, which are subject to greater liquidity, leverage, and counterparty risk. These factors can affect Fund performance.

The Ultra Short Bond Fund is subject to the general risks associated with investing in debt securities, including market, credit, liquidity, and interest rate risk. The value of an investment in the Fund will change as interest rates fluctuate in response to market movements. When interest rates rise, the prices of debt securities are likely to decline, and when interest rates fall, the prices of debt securities tend to rise. Debt securities are subject to credit risk, which is the risk that the issuer will fail to make timely payments of interest and principal to the Fund. The Fund may invest in foreign or emerging market securities, which may be adversely affected by economic, political, or regulatory factors and subject to currency volatility and greater liquidity risk. The Fund may invest in derivatives, which are subject to greater liquidity, leverage, and counterparty risk. Although the Fund may invest in money market securities, this is not a money market fund. These factors can affect Fund performance. As it is a newly organized fund, the Fund's performance at this time is very limited. The Fund's performance achieved during its initial period of investment operation may not be replicated over longer periods and may not be indicative of how the Fund will perform in the future. Past performance is no guarantee of future results.

The Floating Rate Fund is subject to the general risks associated with investing in debt securities, including market, credit, liquidity, and interest rate risk. The value of investments in debt securities will fluctuate in response to market movements. When interest rates rise, the prices of debt securities are likely to decline, and when interest rates fall, the prices of debt securities tend to rise. The Fund may invest substantially in high yield, lower-rated securities. These securities carry increased risks of price volatility, illiquidity, and the possibility of default in the timely payment of interest and principal. Moreover, the specific collateral used to secure a loan may decline in value or become illiquid, which would adversely affect the loan's value. The Fund may invest in foreign or emerging market securities, which may be adversely affected by economic, political, or regulatory factors and subject to currency volatility and greater liquidity risk. The Fund may invest in derivatives, which are subject to greater liquidity, leverage, and counterparty risk. Certain of the Fund's derivative transactions may give rise to leverage risk. Leverage, including borrowing for investment purposes, may increase volatility in the Fund by magnifying the effect of changes in the value of the Fund's holdings. The use of leverage may cause investors in the Fund to lose more money in adverse environments than would have been the case in the absence of leverage. These factors may affect Fund performance.

A fund's portfolio is actively managed and may change significantly over time.

New Fund Risk: The Ultra Short Bond Fund is newly organized. There can be no assurance that the Fund will reach or maintain a sufficient asset size to effectively implement its investing strategy.
