Past performance is not a reliable indicator or guarantee of future results. The value of an investment in fixed-income securities will change as interest rates fluctuate and in response to market movements. As interest rates fall, the prices of debt securities tend to rise. As rates rise, prices tend to fall. Treasuries are debt securities issued by the U.S. government and secured by its full faith and credit. Income from Treasury securities is exempt from state and local taxes.

Data as of 09/30/2019, unless noted otherwise.

¹FTSE 10 Year Treasury Bond Index. ²Returns based on A share class at NAV.

The Short Duration Fund's performance at net asset value excludes sales charges. If sales charges, including any applicable contingent deferred sales charge (CDSC), had been included, performance would have been lower.

Double-digit returns are instances of high double-digit returns that were achieved primarily during favorable market conditions and may not be sustainable over time. Indexes are unmanaged, do not reflect the deduction of fees or expenses, and are not available for direct investment.

Past performance is not a reliable indicator or guarantee of future results.

The ranking information shown above reflects the Fund's relative performance to other mutual funds within the Fund's peer group and does not reflect the absolute performance of the Fund. It is possible that during any given time frame within the periods shown above the Fund may have had negative performance.

Morningstar Category rankings are based on total returns at net asset value and include the reinvestment of all distributions and do not take into account sales charges. Morningstar percentile rankings for the specified periods are relative to all share classes of funds that have the same investment categories.

Morningstar Information

The Morningstar Rating™ for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Barron's, "Best Fund Families of 2018," March 11, 2019. Barron's rankings are based on asset-weighted returns in five categories — US equity funds; world equity funds; mixed equity funds; taxable bond funds; and tax-exempt funds. To be included for Lipper/Barron's Fund Survey, each fund in the survey must have had at least three funds in Lipper's general equity category, one world equity category, one mixed-asset, two taxable-bond funds and one national tax-exempt bond fund. Rankings also take into account an individual fund's performance within its Lipper peer universe. Each fund's return was measured against those of all funds in its Lipper category, resulting in a percentile ranking which was then weighted by asset size, relative to the fund family's other assets in its general classification. Lipper calculated each fund's net total return for the year ended December 31, 2018, minus the effects of 12b-1 fees and sales charges. Barron's Fund Family Rankings are awarded annually.

Index Information

Indexes are unmanaged, do not reflect the deduction of fees or expenses, and an investor cannot invest directly in an index.

The **Bloomberg Barclays U.S. Aggregate Bond Index** is an unmanaged index composed of securities from the Barclays Government/Corporate Bond Index, Mortgage-Backed Securities Index, and the Asset-Backed Securities Index. Total return comprises price appreciation/depreciation and income as a percentage of the original investment. Indexes are rebalanced monthly by market capitalization.

The **FTSE 10 Year Treasury Bond Index** is a broad measure of the performance of the medium-term U.S. Treasury securities.

The **Morningstar Short-Term Bond Category** represents funds that invest primarily in corporate and other investment-grade U.S. fixed income issues and typically have durations of 1.0 to 3.5 years.

The **Morningstar Intermediate-Core Bond Category** represents funds that invest primarily in investment-grade U.S. fixed-income issues including government, corporate, and securitized debt, and hold less than 5% in below investment-grade exposures.

The **Morningstar Nontraditional Bond Category** contains funds that pursue strategies divergent in one or more ways from conventional practice in the broader bond-fund universe.

The **Morningstar Multi-Sector Bond Category** represents funds that seek income by diversifying their assets among several fixed-income sectors, usually U.S. government obligations, U.S. corporate bonds, foreign bonds, and high-yield U.S. debt securities.

Performance data quoted is historical. Past performance is not a reliable indicator or guarantee of future results. Current performance may be higher or lower than the performance data quoted. The investment return and principal value of an investment in any fund will fluctuate as the prices of the individual securities in which they invest fluctuate, so that shares, when redeemed, may be worth more or less than their original cost. Different investments carry different risk.

A Note about Risk

Short Duration Income Fund: The Fund is subject to the general risks associated with investing in debt securities, including market, credit, liquidity, and interest rate risk. The value of an investment will change as interest rates fluctuate and in response to market movements. When interest rates fall, the prices of debt securities tend to rise, and when interest rates rise, the prices of debt securities are likely to decline. Debt securities are subject to credit risk, which is the risk that the issuer will fail to make timely payments of interest and principal to the Fund. The Fund may invest in high yield, lower-rated debt securities, sometimes called junk bonds and may involve greater risks than higher-rated debt securities. These securities carry increased risks of price volatility, illiquidity, and the possibility of default in the timely payment of interest and principal. The Fund may invest in foreign or emerging market securities, which may be adversely affected by economic, political, or regulatory factors and subject to currency volatility and greater liquidity risk. The Fund may invest in derivatives, which are subject to greater liquidity, leverage, and counterparty risk. These factors can affect Fund performance.

Treasuries are debt securities issued by the U.S. government and secured by its full faith and credit. Income from Treasury securities is exempt from state and local taxes.

Neither diversification nor asset allocation can guarantee a profit or protect against loss in declining markets.

Glossary

Excess return is the amount by which the Fund's performance exceeded the peer group at net asset value (NAV) of average annual returns. **Standard deviation** is a measure of volatility. Applied to an asset's return, it provides a measure of the range of those returns. A higher standard deviation means a greater range of returns. **Duration** is a measure of the sensitivity of the price of a fixed-income asset to a change in interest rates and is expressed in years. **Sharpe ratio** is the measure of excess return per unit of risk. **Basis point (BPS)** is one one-hundredth of a percentage point.
